

Average sodium ion battery storage price per 1GW in Serbia

Are sodium ion batteries a viable option?

Scalability: The scalability of sodium-ion battery production promises substantial economies of scale. As production ramps up, the per-unit cost of batteries is expected to decrease, making them an even more attractive option for large-scale energy storage and electric vehicles.

How much will sodium ion batteries cost in 2028?

Assuming a similar capex cost to Li-ion-based battery energy storage systems (BESS) at \$300/kWh, sodium-ion batteries' 57% improvement rate will see them increasingly more affordable than Li-ion cells, reaching around \$10/kWh by 2028.

Will sodium-ion batteries dominate the future of long-duration energy storage?

With costs fast declining, sodium-ion batteries look set to dominate the future of long-duration energy storage, finds AI-based analysis that predicts technological breakthroughs based on global patent data. Sodium-ion batteries' rapid development could see long-duration energy storage (LDES) enter mainstream use as early as 2027.

How much does a sodium ion cell cost in 2024?

The average cost for sodium-ion cells in 2024 is \$87 per kilowatt-hour (kWh), marginally cheaper than lithium-ion cells at \$89/kWh.

How much does battery storage cost in Europe?

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from EUR250 to EUR400 per kWh, with a clear downward trajectory expected in the coming years.

How much does battery storage cost?

The largest component of utility-scale battery storage costs lies in the battery cells themselves, typically accounting for 30-40% of total system costs. In the European market, lithium-ion batteries currently range from EUR200 to EUR300 per kilowatt-hour (kWh), with prices continuing to decrease as manufacturing scales up and technology improves.
