

Enterprise ESS system cost breakdown in Egypt 2030

What are the challenges facing the energy sector in Egypt?

As a result, the energy sector has faced new challenges and barriers, such as intermittent power outages, while the economy has faced an increasing fiscal deficit due to high subsidies on energy prices - subsidies that the government has been reducing. Egypt is one of Africa's largest energy markets.

Is the energy transition good for Egypt's energy sector?

The energy transition is net positive for job creation in Egypt's energy sector (Figure S3). Total energy sector employment could reach around 1.5 million under the PES and over 2.4 million under the 1.5°C Scenario by 2050.

Will EGP 2 trillion be needed in Egypt's energy sector?

The International Finance Corporation (IFC) believes that EGP 2 Trillion are required to be brought into Egypt's energy sector in climate-smart investments by 2030. Egypt is expected to overtake South Africa in the next decade to become the largest electricity market in Africa.

Why did Egypt start a major economic reform & Stabilisation Programme?

In 2016, Egypt began a major economic reform and stabilisation programme. This aimed at addressing social and economic issues, including social injustice, rising unemployment and poverty, inflation and the limited flexibility available to the government in its spending choices (Abou-Ali et al., 2023).

How many EVs will Egypt make in 2022?

One of the main stakeholders in this field is the Ministry of Public Enterprise Sector. In June 2021, this announced that Egypt would manufacture EVs, starting in 2022, with an eventual capacity of 50 000 cars. The ministry also announced that the country would build 3 000 charging stations, where 6 000 cars could be charged at the same time.

How many energy jobs will Egypt have by 2050?

By 2030, the number of people employed in Egypt's energy sector may have already risen from the current 0.4 million to over 1.0 million under the PES and 1.5 million under the 1.5°C Scenario. In the latter, 42.2% of the energy industry workforce will work in renewables by 2050, representing around 1.0 million jobs.
