

## Total investment cost of large scale battery storage project in Mexico

Should energy storage be considered a transmission and distribution asset in Mexico?

In Mexico, defining energy storage as a generation or a transmission and distribution asset is not only critical to establish revenue streams, but also to determine whether EST will be able to operate under a regime of free competition.

Is energy storage a global problem?

Despite their advantages, most EST have not been widely diffused in the global market. Although some EST still face high costs and technological uncertainty, it is widely accepted that the main barriers to the deployment of energy storage worldwide are inadequate regulatory frameworks and lack of policy support [ , , ].

How much money does KfW invest in solar-plus-storage projects?

In 2013, the state-owned bank KfW launched programme 275, which offered low-interest loans and investment grants for 30% of the capital costs of solar-plus-storage installations until 2016. In that period, KfW invested around EUR60 million in almost 19,000 of these projects.

How does the accelerated cost recovery system work?

Under the Modified Accelerated Cost Recovery System, the current tax depreciation system in the US, standalone and solar-plus-storage systems can receive seven to five-year depreciation schedules, equivalent to up to a 21% reduction in capital costs. Solar-plus-storage systems can also obtain investment tax credits of up to 30% .

Are hybrid storage systems eligible for Sgip rebates?

For over a decade, hybrid and standalone storage systems in California have been eligible to receive rebates for behind-the-meter applications through the Self-Generation Incentive Programme (SGIP) .
