

Turnkey microgrid storage EPC contract price in New Zealand

Should a project be delivered under an EPC or turnkey contract?

One of the main drivers for and major advantages delivering a project under an EPC or turnkey contract, as opposed to adopting a multi-contract approach, is that project developers and project finance lenders have a single point of responsibility.

Why do we need a microgrid system?

Over recent years, our changing climate has highlighted the need for energy resiliency. Microgrid systems can offer access to energy, increased autonomy from the electricity network, increased reliability, resiliency to climate change impacts (e.g. cyclones), reduced electricity bills, lower green-house gas emissions, and environmental stewardship.

What is an EPC contract?

Similar to "Principal's Requirements" commonly found in a D&C contract, an EPC contract will generally include "Employer's Requirements". This is often a limited output specification, which sets the parameters and objectives that the contractor must meet.

Should EPC contractors undertake early works?

There is an emerging trend for principals to engage the intended EPC contractor to undertake early works either before entering the EPC contract or before notice to proceed with the entire project is given. Usually, this is to enable international contractors to undertake geotechnical investigations and better price the ground risk.

A turnkey contract is an agreement where a single contractor handles the entire project--design, construction, and delivery--until it's fully operational. The client's role is minimal, often just "turning the key" to start ...
